European Design Firm Creates Innovative Foldable Dibond **Furniture Line**

February 10, 2015

The original "trek" furniture series was made using wood. Looking to explore new materials that were easier to manufacture, lighter and could produce a more stable end product, Swedish design firm, design-factory GmbH. stumbled upon Dibond aluminum composite.

Design-Factory GmbH originally specialized in graphic design but expanded their expertise to include furniture. product

design and displays.

According to designer Sven Bosshard, "Our wood based concepts required a lot of space when shipping, resulting in unnecessary additional transport cost as well as packaging material that harms the environment."

During their material exploration they looked at various materials including acrylic, steel and aluminum, before discovering Dibond. They describe Dibond as a "hybrid material combination" because it is comprised of two pre-painted sheets of aluminum with a solid polyethylene core.

The "stealth trek" foldable stool series was inspired by stealth aircrafts, which are slim, edgy and aerodynamic. crafts also have a lightweight appearance when viewed in the sky, as at different angles the planes become virtually invisible. These characteristics are seen in the furniture design with the use of a lightweight, thin metal material dramatic angles.

The designers chose silver and
